DynamoDB > Tables > products > Create index
Create global secondary index Info
Global secondary indexes allow you to perform queries on attributes that are not part of a table's primary key. Note that global secondary index read and write capacity settings are separate from those of the table, and they will incur additional costs.
Index details Info
Index name
Type the index name
Between 3 and 255 characters. Only A-Z, a-z, 0-9, underscore characters, hyphens, and periods allowed.
Partition key | Info
The partition key is part of the table's primary key. It is a hash value that is used to retrieve items from your table and allocate data across hosts for scalability and availability.
Attribute
Enter the attribute name
Data type
String
Add new attribute
You can add up to 3 more attributes.
Sort key - optional | Info
You can use a sort key as the second part of a table's primary key. The sort key allows you to sort or search among all items sharing the same partition key.
Attribute
Enter the attribute name
Data type
String
